

## Dejan Kosić

technical director of Ponikve eco island Krk, environmental volunteer, has been developing a communal standard on the island of Krk for more than fifteen years, such as the Ecologically Based Waste Management System door to door. In the EU project "InNoPlastic" he has the role of monitoring and removing plastic litter from beaches and producing new products from that plastic. One of the co-founders of the first Croatian energy cooperative named „Energy community of Krk“. Volunteer in the preservation of the sea and the marine environment, where he often organizes cleaning actions and education of children with the Blue Bag project. He strongly supports the energy sustainability of the island of Krk, solving the problem of plastic waste by producing objects from recycled plastic using 3D printers. With his family, he often spends free time in nature, especially at sea or sailing.
